Tulley in 2009

Gever Tulley is an American writer, speaker, educator, entrepreneur, and computer scientist. He is the founder of the **Brightworks School** (in San Francisco in 2005), **Tinkering School** and the non-profit **Institute for Applied Tinkering**. His more recent work centers around the concept of students learning through building projects. He has delivered multiple TED talks on his work and published the book *50 Dangerous Things (You Should Let Your Children Do)*.

At **Brightworks School**, children learn by doing with many hands-on projects. “The projects are based on exploration and experimentation. Making use of various materials, students are encouraged to develop projects through which they develop skills such as creativity, communication and working in groups.”

en.wikipedia.org/wiki/Tinkering_School

“Learning happens everywhere: at school, at home, out in the world. At Brightworks, we bridge the gaps between those three places in a child’s life by fostering a mindset of curiosity and interest and an environment of exploring and questioning at school that weaves learning and life experiences together.”
